

## Addendum For Canada TopoCreate™ 6.3 Map Coverage by CD

The high detail map data provided with this program is organized into four regions. If you chose to use Full Install, all of the high detail map data will be available from your hard drive. If you chose to use a Compact or Custom Installation, you will need to use the appropriate CD for your region when trying to access high detail map data.

In this package, southwest Canada is on CD 1; southeast Canada is on CD 2; central Canada is on CD 3 and northern Canada is on CD 4. If you are using a Compact installation and you want to see medium detail world maps, use CD 1 (southwest) in your drive. To view the high detail data boundaries, see the figure below.

Map showing approximately where data is divided on four CDs.
